2. **The Target Multiplier:** The payout multiplier they wish to attain (e.g., 2x, 10x, 100x, or perhaps approximately 1,000,000 x).

When these are set, the player initiates the round. The game produces a random number. If the produced number is **greater than or equal to** the target multiplier, the gamer wins their bet increased by that target. If the created number fails, the bet is lost.

How Limbo Works: The Mechanics Behind the Bets

Before a bet is placed, the casino creates a hashed version of the winning outcome. After the round concludes, gamers can confirm the math to ensure the gambling establishment did not manipulate the outcome.
