In modern online platforms, the game is frequently digitized. Players can bet a computer algorithm, take part in peer-to-peer (P2P) wagering, or enter bracket-style competitions where the prize pool grows based upon buy-ins.

The Basic Rules of Play

Comprehending the Odds and House Edge

When gamblers shift from conventional casino video games like Blackjack or Roulette to Rock Paper Scissors, they often misconstrue the math. At a look, the chances seem simple:

Choice	Winning Probability	Losing Probability	Connect Probability
Rock	33.33%	33.33%	33.33%
Paper	33.33%	33.33%	33.33%
Scissors	33.33%	33.33%	33.33%

However, when cash is presented on platform-based betting websites, the platform normally takes a **rake** or a commission (usually in between 2% and 5% of the pot). This introduces a negative expected worth (-EV) for both

players over the long term, similar to house edges in traditional table games.

 - If a gamer *wins* a round, they tend to toss the same indication again in the next round.
 - If a player *loses* a round, they tend to shift to the next logical product in the series (e.g., if they lost with Rock, they typically change to Paper next).
