The core objective is deceptively simple: **squander before the multiplier "crashes."**

If a player effectively cashes out at 2.50 x, they double their cash (minus a slight house edge). Nevertheless, if the crash happens before they struck the cash-out button, their entire stake for that round is lost. The crash can take place almost immediately at 1.00 x, or it can climb up into the thousands-- though high multipliers are extremely uncommon.

3. **The Decision:** Players enjoy the multiplier climb. They should decide when to strike the "Cash Out" button. Greed dictates staying in longer for a larger payment, while caution prompts an early exit.
4. **The Crash:** At a completely random, algorithmically determined minute, the game crashes.
5. **The Outcome:** Anyone who squandered prior to the crash wins their bet increased by that precise cash-out rate. Anyone who remained in loses.
