What is the Limbo Gambling Game?

At its core, Limbo is a simplified, extremely streamlined variation of crash gambling. Coming from greatly within the cryptocurrency gambling establishment sector, the game is built around a single property: **choosing a target multiplier and hoping the randomly generated outcome meets or goes beyond that target.**

Unlike standard slots with complicated paylines or blackjack with deep strategic charts, Limbo strips gambling down to pure numbers. There are no flashing lights, themed symbols, or narrative arcs. Rather, gamers are greeted by a clean user interface featuring a target multiplier input box, a bet amount selector, and a popular "Bet" button.

How a Standard Round Works:

1. **Set the Bet:** The player selects just how much currency to bet on the round.
2. **Pick a Target Multiplier:** The player selects their preferred payment multiplier (e.g., 2.00 x, 10.00 x, and even 1,000,000 x).
3. **Chance:** The player starts the round.
4. **The Outcome:** The game's random number generator (RNG) produces a result. If the generated multiplier is *equivalent to or higher* than the target, the gamer wins their bet multiplied by the target. If it fails, the stake is lost.

Understanding the Mechanics and House Edge

To the uninitiated, the massive possible payouts in Limbo can appear too excellent to be real. However, the game runs on rigorous mathematical probabilities. Every target multiplier has a matching win likelihood.

|Target Multiplier|Win Probability (Approx. with 1% House Edge) ||:-- |:--|| **1.01 x**|98.02% | **2.00 x**|49.50% | **5.00 x**|19.80% | **10.00 x**|9.90% | **50.00 x**|1.98% | **100.00 x**|0.99% | **1,000.00 x**|0.099%|

As highlighted in the table above, the greater the multiplier a player chases after, the lower their statistical chance of winning.
