Table: Common Tower Game Mechanics and Their Strategic Value

Mechanic	Description	Strategic Value/ Pro-Tip
Pathing/ Mazing	Forcing enemies to stroll a longer route using placed towers. Optimizes the "time-under-fire" for your damage dealerships.	Develop serpentine paths rather than straight lines.
Targeting Priorities	Setting towers to target the <i>First, Last, Strongest, or Weakest</i> opponent. Avoids overkill on weak minions and ensures heavy-hitters are focused down early.	
Resource Economy	Getting currency (gold/energy) via eliminates, interest, or dedicated farms. Balance financial investment: costs excessive on defense starves you of development; hoarding gold leads to being overwhelmed.	
Elemental Weaknesses	Matching specific damage types (Fire, Ice, Lightning) to opponent armor types. Ice slows quickly units; Fire deals damage-over-time to high-health targets. Make use of these multipliers.	
Active Abilities	International spells (meteor strikes, freezes, supports) with cooldowns. Conserve these for "employer waves" or emergency leaks where basic towers stop working.
