Understanding the Math: House Edge and Payouts

In a theoretical, fair coin toss in the physical world, the probability of landing on heads or tails is exactly 50% (1 in 2, or $\frac{1}{2}$). If casinos provided a true 1:1 payment on a 50/50 game with absolutely no house edge, it would be a break-even game for the home, which breaches the essential organization model of gambling.

To keep an earnings, casinos adjust the payment chances or introduce a small cost.

Feature Fair Coin Toss (Real World) Standard Casino Coin Flip **Likelihood of Heads** 50.00% ~ 49.5% to 50.00% (depending upon RNG) **Probability of Tails** 50.00% ~ 49.5% to 50.00% (depending upon RNG) **Standard Payout** 2.00 x (Even Money) 1.96 x to 1.98 x (or 2.00 x with a 1-2% home fee) **House Edge** 0.00% Typically 1% to 3%

As revealed in the table above, the home edge is normally baked into the payment structure or taken as a tiny commission on winning bets.
