How Transactions Work: Steam API and P2P Trading

In the past, CS2 gambling websites utilized bots that directly traded with players by means of Steam accounts. However, Valve has actually broken down on automated trading bots over the years by carrying out trade lock periods (items traded can not be re-traded for 7 days) and updating API security.

Today, most platforms utilize **Peer-to-Peer (P2P) systems**.

1. When a gamer desires to deposit, the site sets them with another gamer aiming to squander.
2. The transferring player sends out the skin straight to the purchaser via a protected Steam trade link.
3. The site credits the depositor's account balance once the trade is verified.

This technique helps platforms prevent direct involvement in dealing with Valve's inventory products while keeping the virtual economy flowing.
