### How Provably Fair Works:

1. **Server Seed:** The casino creates a secret random string of data and hashes it before the game begins.
2. **Customer Seed:** The player's browser generates a random seed, or the gamer can input their own.
3. **The Result:** The game outcome is determined utilizing a mix of the server seed, customer seed, and a nonce (a number that increments with each bet).
4. **Confirmation:** After the round, the unhashed server seed is revealed. Players can plug these variables into third-party calculators to validate that the result was predetermined and mathematically fair.
