2. **The Ascent:** A multiplier begins at 1.00 x and starts climbing up quickly.
3. **The Objective:** Players must manually "money out" before the multiplier randomly stops-- or "crashes."
4. **The Outcome:** If a gamer squanders before the crash, they increase their stake by the current number. If the multiplier crashes before they cash out, they lose their entire bet.

The tension originates from human psychology: do you cash out early for a safe, modest earnings, or hold on for an enormous payout, risking total loss in a portion of a 2nd?

The Mechanics Behind the Multiplier

How does a crash game really work behind the scenes? While every platform utilizes a slightly various proprietary system, the underlying technology counts on **provably reasonable algorithms**.

Crucial Element of Provably Fair Crash Games:

- **Server Seed:** Generated by the platform before the round and concealed up until afterwards.
- **Customer Seed:** Provided by the gamer's internet browser (or a public blockchain hash) to affect the result.
- **Nonce:** A sequential number that increments with every round played.
