At its core, the Mines game is a single-player casino game played on a grid-- normally a 5x5 design including 25 hidden tiles. Below these tiles lie a fixed variety of hidden "mines" and "safe areas" (typically represented as stars, gems, or gold coins).

The objective is simple: discover as many safe spots as possible without clicking on a mine. Whenever the player effectively exposes a safe tile, their potential payout multiplier boosts. However, clicking a single mine results in an instant loss of the current round's bet.

Unlike traditional slots where outcomes are entirely out of the player's hands, Mines provides an interactive component: **company**. Gamers choose when to continue clicking for higher benefits and when to "cash out" and protect their payouts.

3. **Start the Game:** The gamer clicks "Bet" or "Play," which produces a fresh, covered grid.
4. **Uncover Tiles:** The player clicks on tiles one by one. Each effective safe tile click increases the multiplier.
5. **Squander or Bust:** At any point after revealing at least one safe tile, the gamer can click the "Cash Out" button to gather their winnings based on the current multiplier. Additionally, they can keep clicking until they struck a mine, losing the stake.

The enjoyment of Mines originates from its vibrant risk-and-reward system. The multiplier boosts with every safe tile exposed, however the rate of boost depends heavily on two aspects:

- The total variety of mines picked by the player.
- The variety of safe tiles currently revealed.
