Rather of depositing money, gamers deposit **CS2 skins** that have a market value identified by the Steam Community Marketplace. The value of the transferred products is converted into "chips" or a virtual balance, which can then be wagered.

3. The Economics of CS2 Skins

- **Third-Party Market Adjustments**-- Most CS2 casino sites utilize their own rate feeds, normally 5%-- 10% lower than Steam prices to protect versus quick price swings.

3.2. Conversion to Play Money

When a player trades a skin to the gambling establishment, the platform designates a **chip value** based on the site's conversion rate. For instance:

Skin (Example)	Steam Market Price	Site Conversion Rate (-- 7%)	Chip Value	AK-47Redline (Classified)	£ 13.00	£ 12.09	M4A4Groan (Contraband)	£ 320.00	£ 297.60
----------------	--------------------	------------------------------	------------	---------------------------	---------	---------	------------------------	----------	----------

The chip value is then used to place bets. If the gamer wins, the payout is determined in chips and later on transformed back into skins at the exact same rate.
