Effect of Row Count

The variety of rows straight affects the volatility and the spread of possible results.

- **Fewer Rows (e.g., 8 rows):** Results in a tighter distribution. The ball is less likely to hit the severe edges, making severe payments rarer, however likewise decreasing the frequency of total-loss center drops.
- **More Rows (e.g., 16 rows):** Creates a wide pyramid. The bell curve of likelihood extends, implying the center slots get very crowded with low returns, while the outright edges hold the life-changing multipliers.
