Unlike roulette or blackjack, which include complex guidelines, Limbo provides the player with a single, clear objective: **select a target multiplier and hope the game produces a result that fulfills or exceeds it.**

The Core Mechanics

1. **Place a Bet:** The gamer wagers a particular quantity of cryptocurrency (Bitcoin, Ethereum, GBPT, etc).
2. **Set a Target Multiplier:** The gamer chooses their desired payment multiplier. This can range anywhere from a modest 1.01 x to huge figures like 1,000,000 x.
3. **Roll the Dice:** The game engine produces a random number.
4. **Win or Lose:** If the generated number is *higher* than or equivalent to the target multiplier, the gamer wins their bet multiplied by the target. If the number falls below the target, the bet is lost.

- **How it works:** Before a round of Limbo starts, the gambling establishment creates a hashed variation of the winning multiplier. The gamer's internet browser likewise contributes a random client seed. This transparency guarantees that players betting genuine cash are getting a really reasonable chance at winning.
