At its core, a "Crash" game is a hectic, high-risk, high-reward wagering format. Inspired by financial trading charts, the game features a multiplier that begins at 1.00 x and rapidly climbs upward till it randomly "crashes."

The objective for the gamer is simple in theory, yet agonizing in practice: location a stake (utilizing genuine cash, cryptocurrency, or CSGO skins), see the multiplier increase, and struck the "Cash Out" button before the multiplier crashes. If the gamer cashes out in time, they win their stake increased by the current number. If the crash takes place before they squander, they lose their stake entirely.

The Basic Mechanics of Crash

1. **The Betting Phase:** Players have a brief window (usually 5 to 10 seconds) to position their bets and additionally set an "auto-cashout" multiplier.
2. **The Ascent:** Once the wagering phase closes, the round starts. A graph or an animated object (typically a rocket, jet, or terrorist character) takes off, and the multiplier ticks upward in real-time.
3. **The Crash:** The round ends abruptly when the system triggers a crash. This can happen anywhere-- even instantly at 1.00 x (frequently referred to as an "immediate bust"), or it can soar past 100x, 500x, or greater.
