When played at a crypto gambling establishment, the game maintains this traditional mechanic but incorporates digital currencies (like Bitcoin, Ethereum, GBPT, and Litecoin). More significantly, top-tier crypto gambling establishments make use of **Provably Fair** algorithms, allowing players to mathematically confirm the fairness of every single drop.

- **High Risk:** The supreme test of volatility. The center slots frequently pay less than the gamer's stake (e.g., 0.2 x or 0.5 x), but the external edges can unlock huge multipliers-- often as much as **1000x** the original bet.

2. Number of Rows

The size of the pyramid can normally be adjusted, usually ranging from **8 to 16 rows**.

- Fewer rows (e.g., 8) imply a shorter drop, fewer pegs, and more focused outcomes in the middle.
- More rows (e.g., 16) develop a broader board, increasing the maximum possible multiplier on the far edges while making it much harder for the puck to reach them.
