If the gamer squanders in time, they win their bet increased by the current coefficient. If the plane flies away (crashes) before they squander, the bet is lost.

- **Live Statistics:** Players have access to real-time data showing previous multipliers, continuous bets from other participants, and a leaderboard highlighting the biggest wins of the day, month, and year.
- **Double Betting:** Aviator enables gamers to position 2 different bets on a single round. This opens up advanced betting strategies, such as cashing out one bet early to protect revenue while letting the second bet trip for a greater multiplier.
- **Vehicle Play and Auto Cash Out:** For players who prefer a structured approach, the game offers automated functions. Auto Play places bets instantly, while Auto Cash Out gathers payouts when a predetermined multiplier is reached.

Basic Strategies for Aviator

While Aviator is basically a game of possibility governed by a Random Number Generator (RNG), gamers frequently use numerous betting techniques to handle their bankroll and optimize their gameplay.

The Low-Risk Strategy (Auto Cash Out)

- **How it works:** Players set the Auto Cash Out function to a very low multiplier, normally in between 1.20 x and 1.50 x.
- **Objective:** To protect regular, small wins. While an abrupt crash at 1.01 x can still erase progress, this technique yields a high portion of successful rounds.

The High-Risk Strategy (Chasing High Multipliers)

- **How it works:** Players disregard low multipliers and wait on rounds where the coefficient reaches 20x, 50x, or perhaps higher.
- **Objective:** To land enormous payments. This strategy needs a robust bankroll, as players will likely sustain a long streak of losses while waiting on an uncommon high multiplier.

The Dual-Bet Strategy

- **How it works:** Utilizing Aviator's two-bet function, a gamer might put a bigger first bet with a car cash-out set to a safe 1.5 x, and a smaller 2nd bet to chase a high multiplier (e.g., 10x or greater).
- **Goal:** The first bet aims to cover the cost of both bets, successfully reducing the effects of threat, while the second bet uses pure revenue potential if it strikes.
